

TRACK USATF Certified? No, But it's probably OK!

This event is believed to utilize a standard and certified 400 meter track.

Nearly 100% of college and high school 400 meter tracks in the USA have been professionally constructed, surveyed and certified to be of correct nominal distance when running in lane #1 with slope and other parameters within tolerance, hence, additional USATF course certification would be superfluous.

Historically, we would actually measure tracks for USATF course certification to confirm the 400 meter distance. That is no longer a common practice except for facilities that have an odd distance track or have not been properly surveyed.
